DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1- 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miichi (US Pat. No. 5,880,745).
- In regard to claims 1-10, Miichi discloses a flat panel display information including video data synchronizing data from a host (15) processing digital in a serial digital communication, comprising: a receiver (45) for reconstructing said display information, a digital-to analog converter (50) for converting said video data to a corresponding video signal and an output terminal for externally transferring said signal and analog video signal to an analog display (Fig. 5, col. 8, lines 41-66). Miichi teaches that the signals inputted from the personal computer (15) through the cable (17) are separated into R (red), G (green), and B (blue) image signals, a horizontal (H) and a vertical (V) synchronizing signal in the input circuit (35)(Fig. 4, col. 8, lines 6-67). Miichi also teaches that the image signal source is realized by a personal, and the personal computer generates an image signal on the basis of an input signal from the connected input device means and the control signal corresponding to the image signal source can be supplied to

the image signal source regardless of the types of image signal source. Therefore, it would have

been obvious to one of ordinary skill in the art at the time of the invention not to utilize any

analog-to-digital converter or phased-locked loop circuit for signal conversion in order to provide

a flat panel display which displays digital display information supplied by a digital data processing

device.

The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

Lim, Bang and Suga et al. are made of record to show various types of flat panel display

information.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner
